Spec. Pavilions

The three drawings of the *Spec. Pavilions* are axonometrics (a scale rendering, like a floor-plan, that also shows the space's volume in three dimensions) expanded vertically to make both floors of the structure visible. Each *Spec. Pavilion* is a variation on the *Bicycle Pavilion,* built in 2002 for two functions: it is a *mirador* (a raised promenade), and it is a storage shed for bicycles. All three *Spec. Pavilions* favour the gaze: *Spec. Pavilion I* houses an office for an outdoor museum or gallery, *Spec. Pavilion II* is a pissoir and cruising area fronted by an ice cream stand, and *Spec. Pavilion III* is a surveillance module.

Terence Gower, 2003

3 Drawings: Ink and wax pencil on Mylar

60 x 45 cm each
